

Risk Assessment Business Overview

How a Securistec risk assessment supports your business

A Securistec Risk Assessment will identify, quantify, qualify and provide recommendations to mitigate your information systems and physical security risks that may exist in your business processes or physical locations

How Securistec partners with your business

Assessment Planning

Identify internal business processes and physical assets to be assessed, set timeline with key business partners

Information Gathering

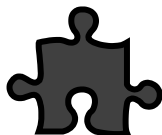

Overall review conducted by Securistec including process mapping, procedure outlines and narratives as needed

Risk Discussion

Discussion of identified vulnerabilities, security threats and mitigation as well as testing and evidence gathering

Final Reporting

Review the outcome of the assessment with management to discuss overall findings & suggested recommendations

By bringing all the pieces of the puzzle together Securistec provides your business the overview and documentation you need to make an informed business decision regarding identified risks, risk acceptance and remediation to ensure that the business decisions you make are the right fit for you. In lieu of having in-house staff we can help you optimize your resources by providing security consulting services.
